TIGNAN

SOS and Emergency Response System

Kita ang Aksyon sa Krisis.

Official Entry for Komsai Hack 2026: RiskReady

Tignan is a real-time emergency response platform built to streamline citizen safety and incident management. It was developed to answer the call of RiskReady: Tech Solutions for Disaster Readiness, aiming to empower communities and increase awareness of disaster risk reduction and management.

The Challenge

The Komsai Hack 2026 required a solution to support people during emergencies and promote resiliency in times of crisis.

Tignan addresses this by connecting people directly to the nearest available support groups. It provides a unified system where:

- **Citizens** — can broadcast emergency alerts with their exact location.
- **Rescuers** — get fast-tracked dispatch information so they can arrive faster.
- **Command centers** — have a live map-based view to orchestrate the response.

By linking these parties efficiently, we hope to foster a more disaster-ready community.

Features

TIGNAN | *Kita ang Aksyon sa Krisis.*

- **Real-time SOS Alerting** — Instant emergency triggers with location tracking.
- **Dynamic Dispatching** — Route incidents to the nearest available responders.
- **Live Monitoring** — Map-based dashboard for managing incidents and rescuer teams.
- **Incident Management** — Track everything from the initial alert creation until the patient is safe.

Technical Stack

Tignan is a monorepo spanning web and mobile:

Directory	Description	Tech
admin/	Web-based command center	React, Vite, Tailwind CSS
rescuer/	Web-based rescuer dashboard	React, Vite, Tailwind CSS, Mapbox
user/	Mobile app for citizens	Expo, NativeWind
schema/	Database & backend	Supabase

Demo Access

Try the live applications using the test accounts below.

App	Link	Email	Password
Rescuer (Web)	tignan-rescuer.vercel.app	rescuer@test.com	password123
Admin (Web)	tignan-admin.vercel.app	admin@test.com	password123
User (Android)	Download APK	user@test.com	password123

Future Expansions

While the current iteration focuses on core SOS alerting and routing, there are several planned incremental updates:

- **In-App Chat Communication** — Direct messaging between the citizen in distress and the assigned rescuer for ongoing updates and first-aid instructions.
- **Push Notifications** — Background push notifications to alert rescuers immediately, even when the app is closed.
- **Offline SMS Fallback** — Allow users without internet access to trigger an SOS alert via standard SMS.
- **Multi-Language Support** — Support for local dialects (e.g., Tagalog, Cebuano) for broader accessibility.
- **Enhanced Role Management** — Granular roles such as dispatchers, field commanders, and system administrators.
